7. LENGTH OF OBSERVATION 30 seconds	8. NUMBER OF OBJECTS three	9. COURSE E to W	
10. BRIEF SUMMARY OF SIGHTING Three evenly spaced objects, shaped like inverted umbrellas, traveling in single file, giving off light amber glow. No trail or exhaust. Crossed about one mile of sky in 30 seconds. Glow appeared to "throb" at one time before obj disappeared.		11. COMMENTS F-86 and CAP light planes rptd in area carrying specially designed lights to simulate movement of artificial satellites. The "30 seconds to cross 1 mile" is 173 ft/sec or 120 MPH, the general speed of light planes. The "throbbing" amber glow lends credence to a/c engine exhausts as may be observed from distance.

'Jetallite' flies to help moonwatchers track satellite

THE first satellite (simulated) to take the air, this Air Force Sabrejet flew over Washington recently in a training program for moonwatchers who will keep track of the real earth satellite. It carried various-size lights (right) under the fuselage to simulate altitudes up to 1,500 miles.

JULY 1957 55

Also a light plane to carry lights at 90 to 110 M

Mock-up for Moon Watchers

AN ARTIFICIAL SATELLITE, twice removed from the real thing, was slated to give volunteer observers a taste of the MOONWATCH mission this week. Subbing for the man-made satellite they will watch during the next year is an equally artificial standin made of a "plumber's friend" suction cup, a small light and some batteries. It was to be towed by light planes of the Civil Air Patrol in exercises designed to train the observers in tracking the satellite. Checking the "bug" used for the test are (left to right) Col. Owen F. Clarke, USAF project officer, Dr. Armand N. Spitz, coordinator for the visual observation portion of the Earth Satellite Program and Col. Donald T. Spiers, test project officer for the Civil Air Patrol.

↙

ASTRONOMY

Four Planets Now Visible

Venus, Mars, Jupiter and Saturn will be visible to the naked eye in June. In addition, nine bright stars, ranging from Antares to Vega, will be visible during the month.

By JAMES STOKLEY

► FOUR of the five planets ever visible to the naked eye can be seen on June evenings. And the fifth, Mercury, may be glimpsed low in the east just before the sun rises.

Venus will be the first of these to make its appearance. Even before the sky has completely darkened after sunset you may be able to see it low in the west. It will set an hour or so after the sun, a little to the north of the horizon's western point. As it disappears before twilight is entirely over, you will not yet be able to see it in a completely darkened sky, as you will later in the year.

Venus and Mars in West

While Venus is brighter than any other star or planet, magnitude minus 3.3 on the astronomical brightness scale, the next planet, in the same part of the sky, is very much fainter. This is Mars, which was so brilliant last autumn at the time of close approach to the earth. Now that it has receded to a distant part of its orbit it has dimmed greatly, having now a magnitude of two.

Mars is low in the northwest in the constellation of Gemini, the twins, and just to the left of the stars Castor and Pollux.

The position of Mars is indicated on the accompanying maps, which depict the sky as it appears about 10:00 p.m., your own kind of standard time—add one hour for daylight saving time—at the beginning of June, or an hour earlier at the middle of the month.

Jupiter and Saturn in South

The other two June planets are in the southern sky.

Brightest is Jupiter, of magnitude minus 1.6. This makes it about 27 times as bright as Mars but less than a quarter as bright as Venus. Jupiter is now in the western end of Virgo, the virgin. It is almost, in fact, in the next-door constellation of Leo, the lion. It is thus between the bright stars Spica, part of Virgo, and Regulus, in Leo, but it is considerably brighter than either.

Saturn, the last of our planets, likewise is about on the border between two star groups. It is in the southeast, actually in Ophiuchus, the serpent-bearer, but it is near the bright reddish star Antares, which is part of Scorpius, the scorpion. The planet surpasses the star in brightness by about two and a half times.

Bright Stars Visible

In addition to Pollux, Regulus, Spica and Antares, five other stars which the astrono-

mer ranks in the first magnitude can be seen on June evenings.

High in the south, above the eastern (left) end of Virgo, is the constellation of Bootes, the bear-driver, in which Arcturus shines.

Another way of finding this star is to look high in the northwest for the familiar group of seven stars that form the Big Dipper. A line through the two lowest stars in the dipper, Dubhe and Merak—also known as the pointers—if followed to the right takes you to Polaris, the pole-star.

If the curved handle of the dipper, through the stars Alioth, Mizar and Alkaid, is continued toward the south, it will bring you to Arcturus. Still extended, this same curved line also reaches Spica.

Even brighter than Arcturus is Vega, in Lyra, the lyre, high in the east and just above the northern cross, which is part of Cygnus, the swan. Another first-magnitude star, called Deneb, is in this group. Still another is just to the right—Altair in Aquila, the eagle.

The ninth and last that is shown on our maps is Capella, in Auriga, the charioteer, just barely above the northwestern horizon, and to the right of Castor and Pollux. Because it is so low in the sky, its light is greatly dimmed by absorption in the earth's atmosphere, and it looks far fainter than it did last winter, when it was shining high in the south.

Saturn and Jupiter Compared

With Jupiter and Saturn both in the evening sky, we have the opportunity of observing and comparing these giants among the planets that revolve around the sun. They are the biggest among the nine planets, which include Uranus, Neptune and Pluto—all too faint to be seen with the naked eye—as well as the earth and the five mentioned earlier.

Whereas the diameter of our earth is 7,918 miles, that of Jupiter is 86,900 miles and that of Saturn is 71,500 miles. For the latter, this is the diameter of the ball of the planet, around which revolves the curious system of rings.

Several thousand miles above Saturn's equator is the innermost ring. The outermost edge of the system is more than 40,000 miles above that, giving the rings a total diameter of 171,000 miles and making Saturn's overall size about twice that of Jupiter.

These rings are not solid, but they are made up of a swarm of millions and millions of small particles. According to the latest ideas, as expressed by Dr. G. P. Kuiper of the Yerkes Observatory, they seem to be made of snow. Probably the satellites of Saturn, nine in number, have a similar composition.

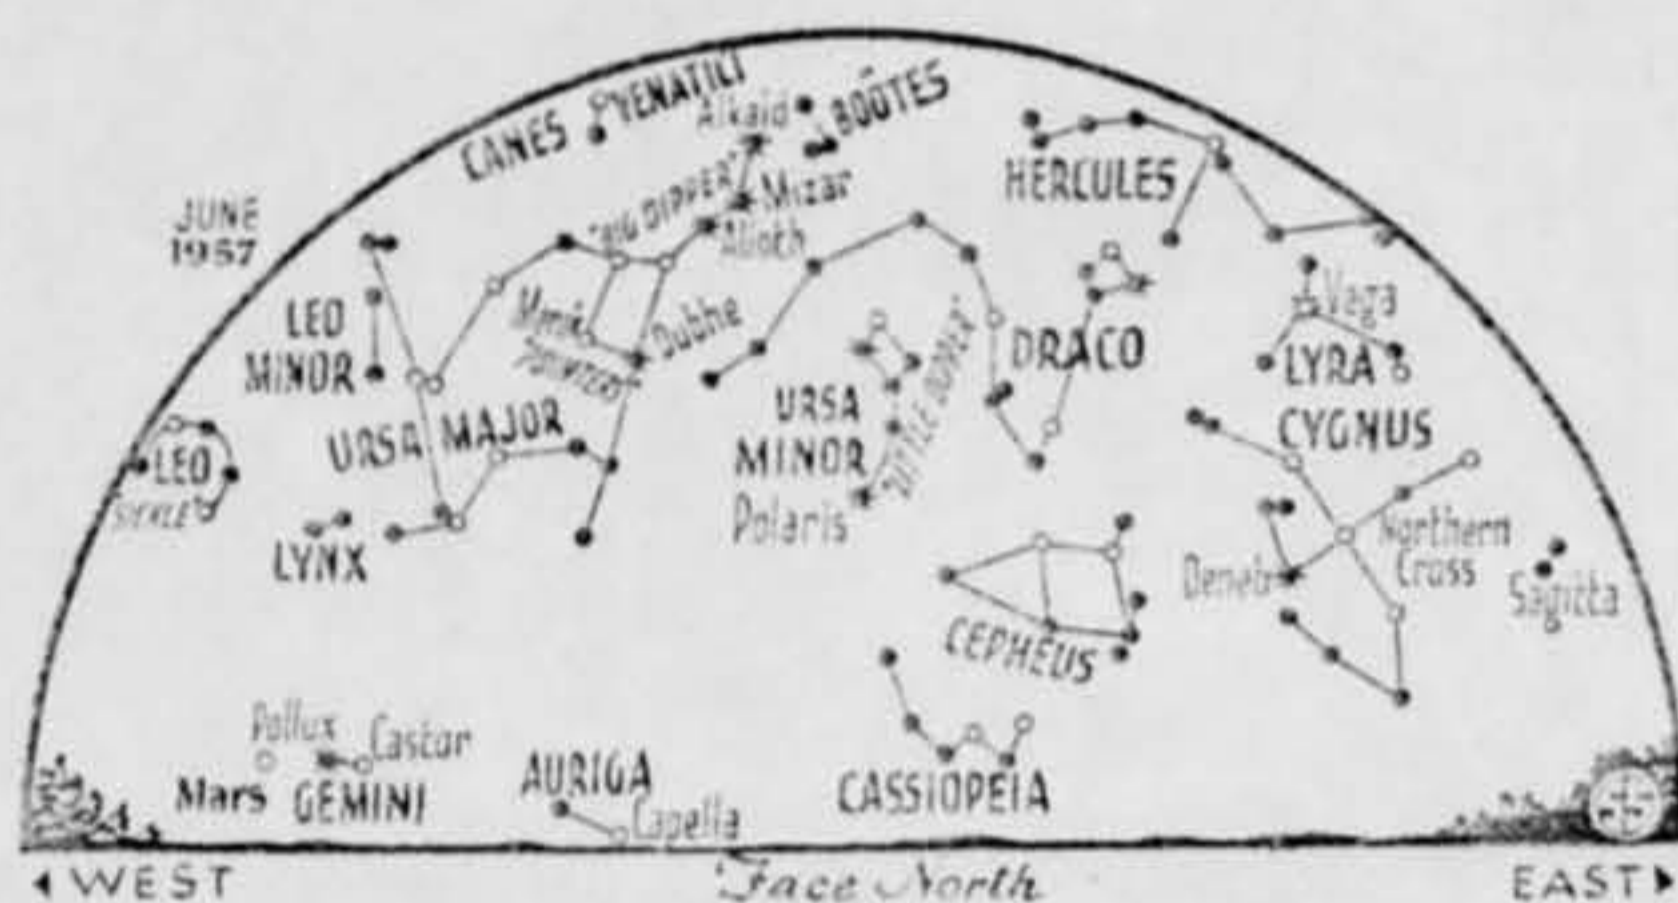

Jupiter's Structure

In its structure, Jupiter is very different from the earth, which is mostly a solid globe, covered with water and a relatively thin atmosphere.

Jupiter, it is believed, has a core, probably made of rock, which is about 44,000 miles in diameter, or roughly a half of that of the whole planet. Around that is a frozen ocean, a layer of ice some 16,000 miles thick. On the outside is an atmosphere, largely hydrogen, 6,000 miles in thickness, containing colored clouds that form the series of belts and other markings that are visible from earth through a telescope.

The ball of Saturn has a similar structure, with the rocky core perhaps 28,000 miles in diameter. The ice layer is estimated to be about 6,000 miles thick, but the depth of the atmosphere is something like 16,000 miles, relatively much deeper than Jupiter's.

Thus, the solid part of Saturn is much less in proportion, which makes its average density very low, about two-thirds that of water. With a big enough lake in which to immerse the planet, Saturn would actually float!

New Orleans

June 1, 1957: Reports from several parts of New Orleans of a "blue streak" falling over the Mississippi River about 10:30 p.m.; in view for more than a minute and reported to have broken in two pieces by at least one observer. — N. O. Times-Picayune, 6/2. (Credit: Dick Hall, New Orleans.)

7 June 1957
McGuire AFB

UNIDENTIFIED OBJECTS CAUSE AIR FORCE ALERT, AT McGUIRE AFB

An air defense alert at McGuire Air Force Base, New Jersey on June 7, 1957, has been stated by the Air Force to have been due to "an unusual number of temporarily unidentified aircraft." Although there is no evidence linking this alert with UFO's, NICAP is making a routine check, since the Air Force final announcement did not state that the unknown aircraft had ever been identified.

This incident, which probably was a routine alert, drew attention at NICAP headquarters because of a letter recently received by a New Jersey member. For reasons which will be obvious, his name has been deleted in quoting his letter:

Gentlemen:

Some months ago I attended a tour of McGuire Air Force Base. During a briefing on the defense mission, and on the subject of intercepts, the officer made a remark of this nature: "When an unknown target on a radar is not identified it is our job to make an intercept to determine whether the target is friendly or not. If it is not, our mission is to destroy it. Of course most of all the

"Unidentified Aircraft" Alert at McGuire AFB Still Unexplained

No explanation of the "unidentified aircraft" alert at McGuire Air Force Base on June 7, 1957, has been received by NICAP, although a request for the details was sent to McGuire AFB almost two months ago.

An Air Force statement on June 7 revealed that three fighter squadrons had been alerted because of "an unusual number of temporarily unidentified aircraft."

We regret being unable to furnish additional information as planned and announced in the No. 1 issue. ●

intercepts lately have been friendly planes." 17

The McGuire Air Force Base alert occurred between 2 and 3 p.m. on June 7th. A state of defense readiness was ordered by the Continental Air Defense Command. The alert affected two air defense command fighter squadrons and a New Jersey Air National Guard squadron.

The Air Force wording "an unusual number of temporarily unidentified aircraft" would indicate a very large formation or group of planes. Normally, the operation of such formations would be known by the Air Defense Command. NICAP will publish the facts in the following issue of the UFO INVESTIGATOR.

June 7-McGuire AF Base=2-3pm=Air Defense Alert called due to 'an unusual number of temporarily unidentified-Aircraft'!(NJ). (It has not yet been revealed if they were UFOs or not.)...(Thanx DV):

17 - 24 June 1957
Beaudette, Minnesota

Week of June 17-24, 1957: Several people at Beaudette, Minnesota, reported big "lantern-like" object in northern sky near horizon. Filter Center at Bemidji stated that they "had reports of the object" and the the AF was trying to locate it on radar. — Roseau (Minn.) Times-Region, 6/27.

**THREE UFO'S IN
V-FORMATION SEEN BY
SHIP CAPTAIN, CREW** 1957

Under NICAP Investigation

Three bright, round objects, flying in a V formation, were sighted on June 18 by the captain and most of the crew of a Matsun Line freighter, according to a report made when the ship reached port in California.

Capt. C. G. Wertz, skipper of the *Hawaiian Fishermen*, was quoted as stating he had never before seen anything like the strange objects. Two of the UFO's, which were later joined by a third, appeared off the ship's port beam about 8 p.m. on June 18, when the freighter was 150 miles from San Francisco.

Chief Electrician Roy Melton, who first sighted the objects, said through binoculars they looked like "small moons, diffusing a cold, white, unchanging light." Melton estimated the objects' altitude at about 10,000 feet.

As Capt. Wertz and the ship's crew watched the two UFO's, a third round, bright object joined the others, forming the V formation. As the sky darkened, the three glowing objects paced the ship for a while, then moved off, still in V formation.

NICAP Will Evaluate

NICAP has asked for detailed reports from Capt. Wertz and Chief Electrician Melton. The Maritime Commission and airlines operating between California and Honolulu have also been queried.

June 18=150miles off San Francisco, Cal-8pm=3 round, bright, glowing, white UFOs in V-Formation, seen by Crew of Freighter. Originally there were only 2 UFOs, but a third Object soon joined them. They paced the Ship at Estimated 10,000ft., then all moved off..(SEA again!).

AFOIN-4X3 Dear Mrs. ~~W. W. Elwood~~:

AFOIN-4X4

We are in receipt of your letter dated 8 July 1957 in which you report an unidentified flying object observed by you on the night of 29 June 1957.

AFOIN-4A

The sighting has not been conclusively identified as yet. You are located adjacent to one of the heaviest air traffics in the United States, as well as in an area of considerable naval, military and air training and other operations. A plot of the location given us discloses it to be approximately 15 miles from the Annapolis Academy area, 35 miles from the Aberdeen Army Proving Grounds, and within a radius of 20 miles from three air traffic lanes.

AFOIN-4B

AFOIN-4C

There is the distinct possibility that you may have observed a series of lights underneath an aircraft designed for the purpose of training observers for the forthcoming artificial satellite. A copy of the aircraft in question is attached.

Your prompt reporting of the incident to proper authorities, and your interest in this matter is appreciated.

AFOIN-4D

Sincerely,

1 Incl

Washington 25, D. C.

Flying Objects Report

- (1) a. Shape: Like inverted shallow umbrellas without handle or ribs.
- b. Size: Looked about size of dishpans, but do not know distance away.
- c. Color: Light amber glow, about like the enclosed piece of paper doubled and held close to an electric light bulb.
- d. Number: Three, in single file. No trail or exhaust.
- e. Speed: They took about thirty seconds to cross over end of open space about one mile wide. 173 ft/sec
= approx
120 MPH.
- f. Sound: No noise heard above noise of car motor. Had disappeared before motor was turned off. (See -
Thermofax
sheet,
attached)
- g. Maneuvers: Progressed in steady line, going from east to west, evenly spaced. Disappeared when hidden by trees on west.
- h. Unusual features: No lights seen such as are shown by planes, either flashing or fixed white, green or red. Entire smooth surface glowed with amber light; at first sighting glow seemed to be throbbing, but by the time they disappeared their glow was steady. 979
2. Time: Sighted about 21:40 Saturday, June 29, 1957. In sight about thirty seconds.
3. Sighting: Visual, through open window of automobile in slow motion. ← note
4. Location: Seen from lane of "Gross Coate" farm, about eight miles WNW from Easton, Maryland, on eastern shore of Chesapeake Bay. Objects were seen while facing south, looking across a field which stretches about one mile between woods on east end and trees on west end. They were about 1/3 of the way up in the sky, and took about thirty seconds to cross from behind east woods to behind trees at west end.
5. Identifying information: Was on my way home to my mother's house after shopping in Easton. I do not drink, and was not over-tired or nervously upset. Have never seen anything like

these before. Mentioned them to my mother, who told me next day that her employer, Miss [redacted], owner of [redacted] farm had spoken of seeing unidentified flying objects the previous evening about half an hour later than the time of my sighting.

6. Weather: Sky overcast with heavy clouds. At first sighting, thought objects might be round bright spots cast by distant searchlights against under side of clouds; but realized at once that they were much brighter and clearer, and that there was no searchlight beam.

7. Nothing to account for sighting.

8. No physical evidence of sighting.

9. No action taken.

10. No air traffic that I know of in the vicinity.

When I stopped motor and got out of car, there was no sound of any planes; farm is many miles from road traffic, and noise of plane in vicinity can be easily heard.

no searchlight beam (from searchlights) only on clouds

[redacted]

(Mrs. [redacted]
[redacted], R.F.D. 1, Easton, Maryland)

Character witness: [redacted] has been in my employ for fifteen years. She is steady, reliable, and sensible. I believe that the above is an accurate description of what she observed.

D. C.

Gentlemen

I am sending you a report along with [REDACTED] as she saw the flying objects from my farm & on the same evening I also saw flying objects -

I will try & give you a description of what I saw -

The night of June 29th I went out, as I do every night on my porch at 10 P.M. which faces due West & saw these objects which were about 20 inches long & about 17 to 18 inches wide, not quite round, there were two of them as far as I know, one was moving north & south & the other south to north, they passed each other directly in front of me, they would pass at the same place each time, I could not see how far they went in each direction as they would disappear behind the trees, but they came back very quickly, they were in color from medium to light amber & a steady glow -

I watched them for several minutes or more & felt they were being controlled as their passing was so accurate, I judge they were about $\frac{1}{3}$ up in the sky -
The sky was overcast & a lot of heavy clouds in the West & there was not a

Gentlemen

I am sending you a report along with [REDACTED] as she saw the flying objects from my farm & on the same evening I also saw flying objects -

I will try & give you a description of what I saw -

The night of June 29th I went out, as I do every night on my porch at 10 P.M. when faces due West & saw these objects which were about 20 inches long & about 17 to 18 inches wide, not quite round, they were two of them as far as I know, one was moving north to south & the other south to north, they passed each other directly in front of me they would pass at the same place each time, I could not see how far they went in each direction as they would disappear behind the trees, but they came back very quickly, they were in color from medium to light amber & a steady flow -

I watched them for fifteen minutes or more & felt they were being controlled as their passing was so accurate, I judge they were about 1/3 up in the sky - the sky was overcast & a lot of clouds in the West & there was not a

(Not a contractor or operations on that night - Saturday
In query to the F-86 carrying lights to
simulate satellites around Washington Area
(See attached clipping) stated he had
heard something about it - and would finally
be the best reported)

Capt Peterson
has stated he
has no knowledge of
any naval activities
in the area - that
his duties to monitor
some of area

George T. Gungy
Capt USAF

Jetallite' flies to help moonwatchers track satellite

THE first satellite (simulated) to take the air, this Air Force Sabrejet flew over Washington recently in a training program for moonwatchers who will keep track of the real earth satellite. It carried various-size lights (right) under the fuselage to simulate altitudes up to 1,500 miles.
