

PROJECT 10073 RECORD CARD

1. DATE September 1962		2. LOCATION Snohomish, Washington		12. CONCLUSIONS ☐ Was Balloon ☐ Probably Balloon ☐ Possibly Balloon ☐ Was Aircraft ☐ Probably Aircraft ☐ Possibly Aircraft ☐ Was Astronomical ☐ Probably Astronomical ☐ Possibly Astronomical ☒ Other Rock & clay ☐ Insufficient Data for Evaluation ☐ Unknown	
3. DATE-TIME GROUP Local _____ GMT - - - -		4. TYPE OF OBSERVATION ☐ Ground-Visual ☐ Ground-Radar ☐ Air-Visual ☐ Air-Intercept Radar			
5. PHOTOS ☒ Yes Physical ☐ No Specimen		6. SOURCE Civilian			
7. LENGTH OF OBSERVATION - - - -		8. NUMBER OF OBJECTS one		9. COURSE found on ground	
10. BRIEF SUMMARY OF SIGHTING Obj light grey in color & light weight. Forwarded in connection with decay of sputnik IV. See: specimen 7-3745-440 (OBJECT IS PHYSICAL SPECIMEN FILE)				11. COMMENTS Analysis by ASD shows that obj not fm outer space. Created by fusion caused by contact with high tension wire which broke and fell to ground.

Report of Analysis

1 October 1962

AFSC(3C7A Capt Bracke)
Andrews AFB
Wash 25 DC

1. Attached is a copy of the ASD report of analysis of the object recovered near Snohomish, Washington. This object was forwarded to FTD from Paine Field, Washington because it was suspected to be a part of Sputnik IV which reentered the earth's atmosphere on 5 September 1962.
2. The ASD report concludes that this object could not be part of a space vehicle and FTD concurs with this conclusion.

LABORATORY

EVALUATION REPORT

Operation Midwing

REPORT NR: 62-19

DATE: 25 September 1962

PROJECT NR: 6771

TYPE EVALUATION:

MANUFACTURER:

SPEC NR:

SUBMITTED BY: FTD

ITEM SERIAL NR:

Lt. Col. R. J. Friend

I. PURPOSE

To identify the sample and its origin.

II. FACTUAL DATA

1. The sample was assigned Physics Laboratory serial number 10023.
2. The sample was photographed to show its dimensions.
3. The sample was examined
 - a. For radioactivity using a scintillation counter. No radioactivity other than normal background was detected.
 - b. By emission spectrochemical methods. The composition of the three different phases were identical. Emission spectrochemical analysis provided these data: Estimated concentrations in weight percent.

(1) Silicon	20%	(7) Calcium	1%
(2) Aluminum	10%	(8) Potassium	0.1%
(3) Sodium	4%	(9) Manganese	0.1%
(4) Iron	3%	(10) Nickel	0.05%
(5) Magnesium	2%	(11) Chromium	0.01%
(6) Titanium	1%		

c. X-Ray Spectrochemical Methods.

X-ray diffraction patterns were identical for samples taken from the core and from the outside layer. The major constituent in both cases was crystalline SiO_2 .

THIS REPORT IS NOT TO BE USED IN WHOLE OR IN PART FOR ADVERTISING OR SALES PROMOTION PURPOSES

d. Infrared Spectrophotometric Methods.

The infrared spectrogram did not show the presence of any organic material. It did confirm the presence of crystalline SiO_2 .

e. Chemical Methods.

1. A chemical test for carbonates was negative.
2. A sample was heated slowly to 1100°C with no apparent change in weight or dimensions. There was some change in color: that is from white to brownish purple.

III. CONCLUSIONS

1. The chemical composition of the sample is that of a bentonite clay. The magnesium has been replaced to some extent by sodium, potassium, and calcium ions.
2. The object could be formed by a sudden application of heat as a lightning bolt or an air arc formed by a broken power line. The molten material could have flowed into water, been exposed to rain, or in water soaked soil. The sudden cooling would cause the outside layers to fracture but adhere to the core. The condition and coloration of the outer layer are expected when a bentonite clay is melted and cooled rapidly. The object was formed in a stream bed or in sand and gravel from a stream bed because stream worn pebbles are embedded in the outer layer.
3. The composition and nature of the object shows beyond doubt that it could not be part of a space vehicle or be from outer space.
