3 August, 1964

Mrs. [REDACTED]
Route 1
Westfield, Wisconsin

Dear Mrs. [REDACTED]

We have the analysis of your "conversation piece" back sooner than I had expected. It is definitely not a meteorite. It is, however, a rather rare example (in your part of the country) of a chunk of native copper. This native copper occurs much farther north than you are, but this was undoubtedly brought down to your area by a glacier.

Native copper is closely tied up with the history of northern Michigan and Wisconsin, as it was the presence of native copper that really opened up the territory.

I am sorry that I can't say that you have a meteorite, but you still do have a good conversation piece.

Sincerely yours,

J. Allen Hynek
Director

Dept. of Defense
Washington D.C.

We have found what we are sure
is a piece of a fallen meteor. One
of the newspapers not long ago
published an article about the
defense department being interested
in them, and about prices
being paid for them. This
one seems to be almost solid
copper and it is very heavy
for its size. We have cut
a small piece from it and
could send it to who ever would
be interested in it. I think
it would weigh about 8 pounds
and is about 6 inch wide - 10 inches
long and varied thickness. It is
a flat - "splash" shape.

Sincerely

Mr. [REDACTED]

Dear Mrs. [REDACTED]

In reply to your recent inquiry regarding government agencies that are interested in obtaining pieces of falling meteors, we suggest you write to the Department of the Air Force, Department of Defense Building, the Pentagon, Washington, D. C. 20330. This office will forward your information to the proper source.

We appreciate and thank you for your kind interest in the Chicago Tribune."

Sincerely,

CHICAGO TRIBUNE
