4. NUMBER OF OBJECTS One	
5. LENGTH OF OBSERVATION Minutes (Varied)	11. BRIEF SUMMARY AND ANALYSIS Observers watched a star like object travel across the sky. Object appeared like a light reflecting off a highly polished metal. Object seemed to stagger in flight and it stopped next to other similar object that did not move, one of which seemed to have the same bluish hue. Object was compared to the planet Venus and to a large ring balloon. Description is consistent with that of a satellite. The lack of insubstantial size and definition of accurate analysis as to what the object may be. Lack of background density and the absence of focus outline, coupled with the presence of pressure marks superimposed on the image indicated this is possibly a processing artifact rather than an actual object.

Place a "B" on the compass where you *last* saw the object.

28. Draw a picture that will show the motion that the object or objects made. Place an "A" at the beginning of the path, a "B" at the end of the path, and show any changes in direction during the course.

Reference UFO sighting 30 March 1966 submitted to Project Blue Book by your unclassified message, 838 AD 12332 April 1966. Enclosed is original negative that was submitted. Request negative be forwarded to A/3C H. Y. Yonemurs, Jr, Forbes AFB, Kansas along with enclosed enlargement and the following Project Blue Book evaluation:

a. The image which appears on the negative and the photograph is of insufficient size and definition for accurate analysis as to what the apparent object may be. Any definite statement is precluded by the absence of exposure and processing information. However, the noticeable lack of background density and the absence of format outline, coupled with the presence of pressure marks superimposed on the image indicates this is possibly a processing aberration rather than an actual image.

1. PURPOSE: This report is written in response to Work Order Number 66-34 requesting photo analysis be performed as to what the unidentified object may be.
2. ANALYSIS: Analysis was conducted jointly by the Photo Analysis Division, TDDPA and the Photo Processing Division, TDDPP.
3. The image which appears on the negative and the photograph is of insufficient size and definition for accurate analysis as to what the apparent object may be. Any definite statement is precluded by the absence of exposure and processing information. However, the noticeable lack of background density and the absence of format outline, coupled with the presence of pressure marks superimposed on the image indicates this is possibly a processing aberration rather than an actual image.
