DEPARTMENT OF TRANSPORTATION
FEDERAL AVIATION ADMINISTRATION

SOUTHWEST REGION
P. O. BOX 1689
FORT WORTH, TEXAS 76101

DATE: December 5, 1968

IN REPLY
REFER TO: SW-90

SUBJECT: Engineering photographs

TO: Air Force Representative
FAA, Southwest Region (SW-900)

The enclosed photographs were taken by Mr. Paul H. Freund, civil engineer with the FAA, Southwest Region, Fort Worth, Texas. The photographs were taken on November 19, 1968, in connection with the location of a navigational aid facility approximately $1\frac{1}{2}$ airline miles southeast of Acton, Texas. The pictures are numbered on the back in the sequence taken, time taken approximately 2:30 P.M.; and all eight shots were taken in a period of thirty to forty-five minutes, which means the shots were taken between the times of approximately 2:30 and 3:30 P.M.

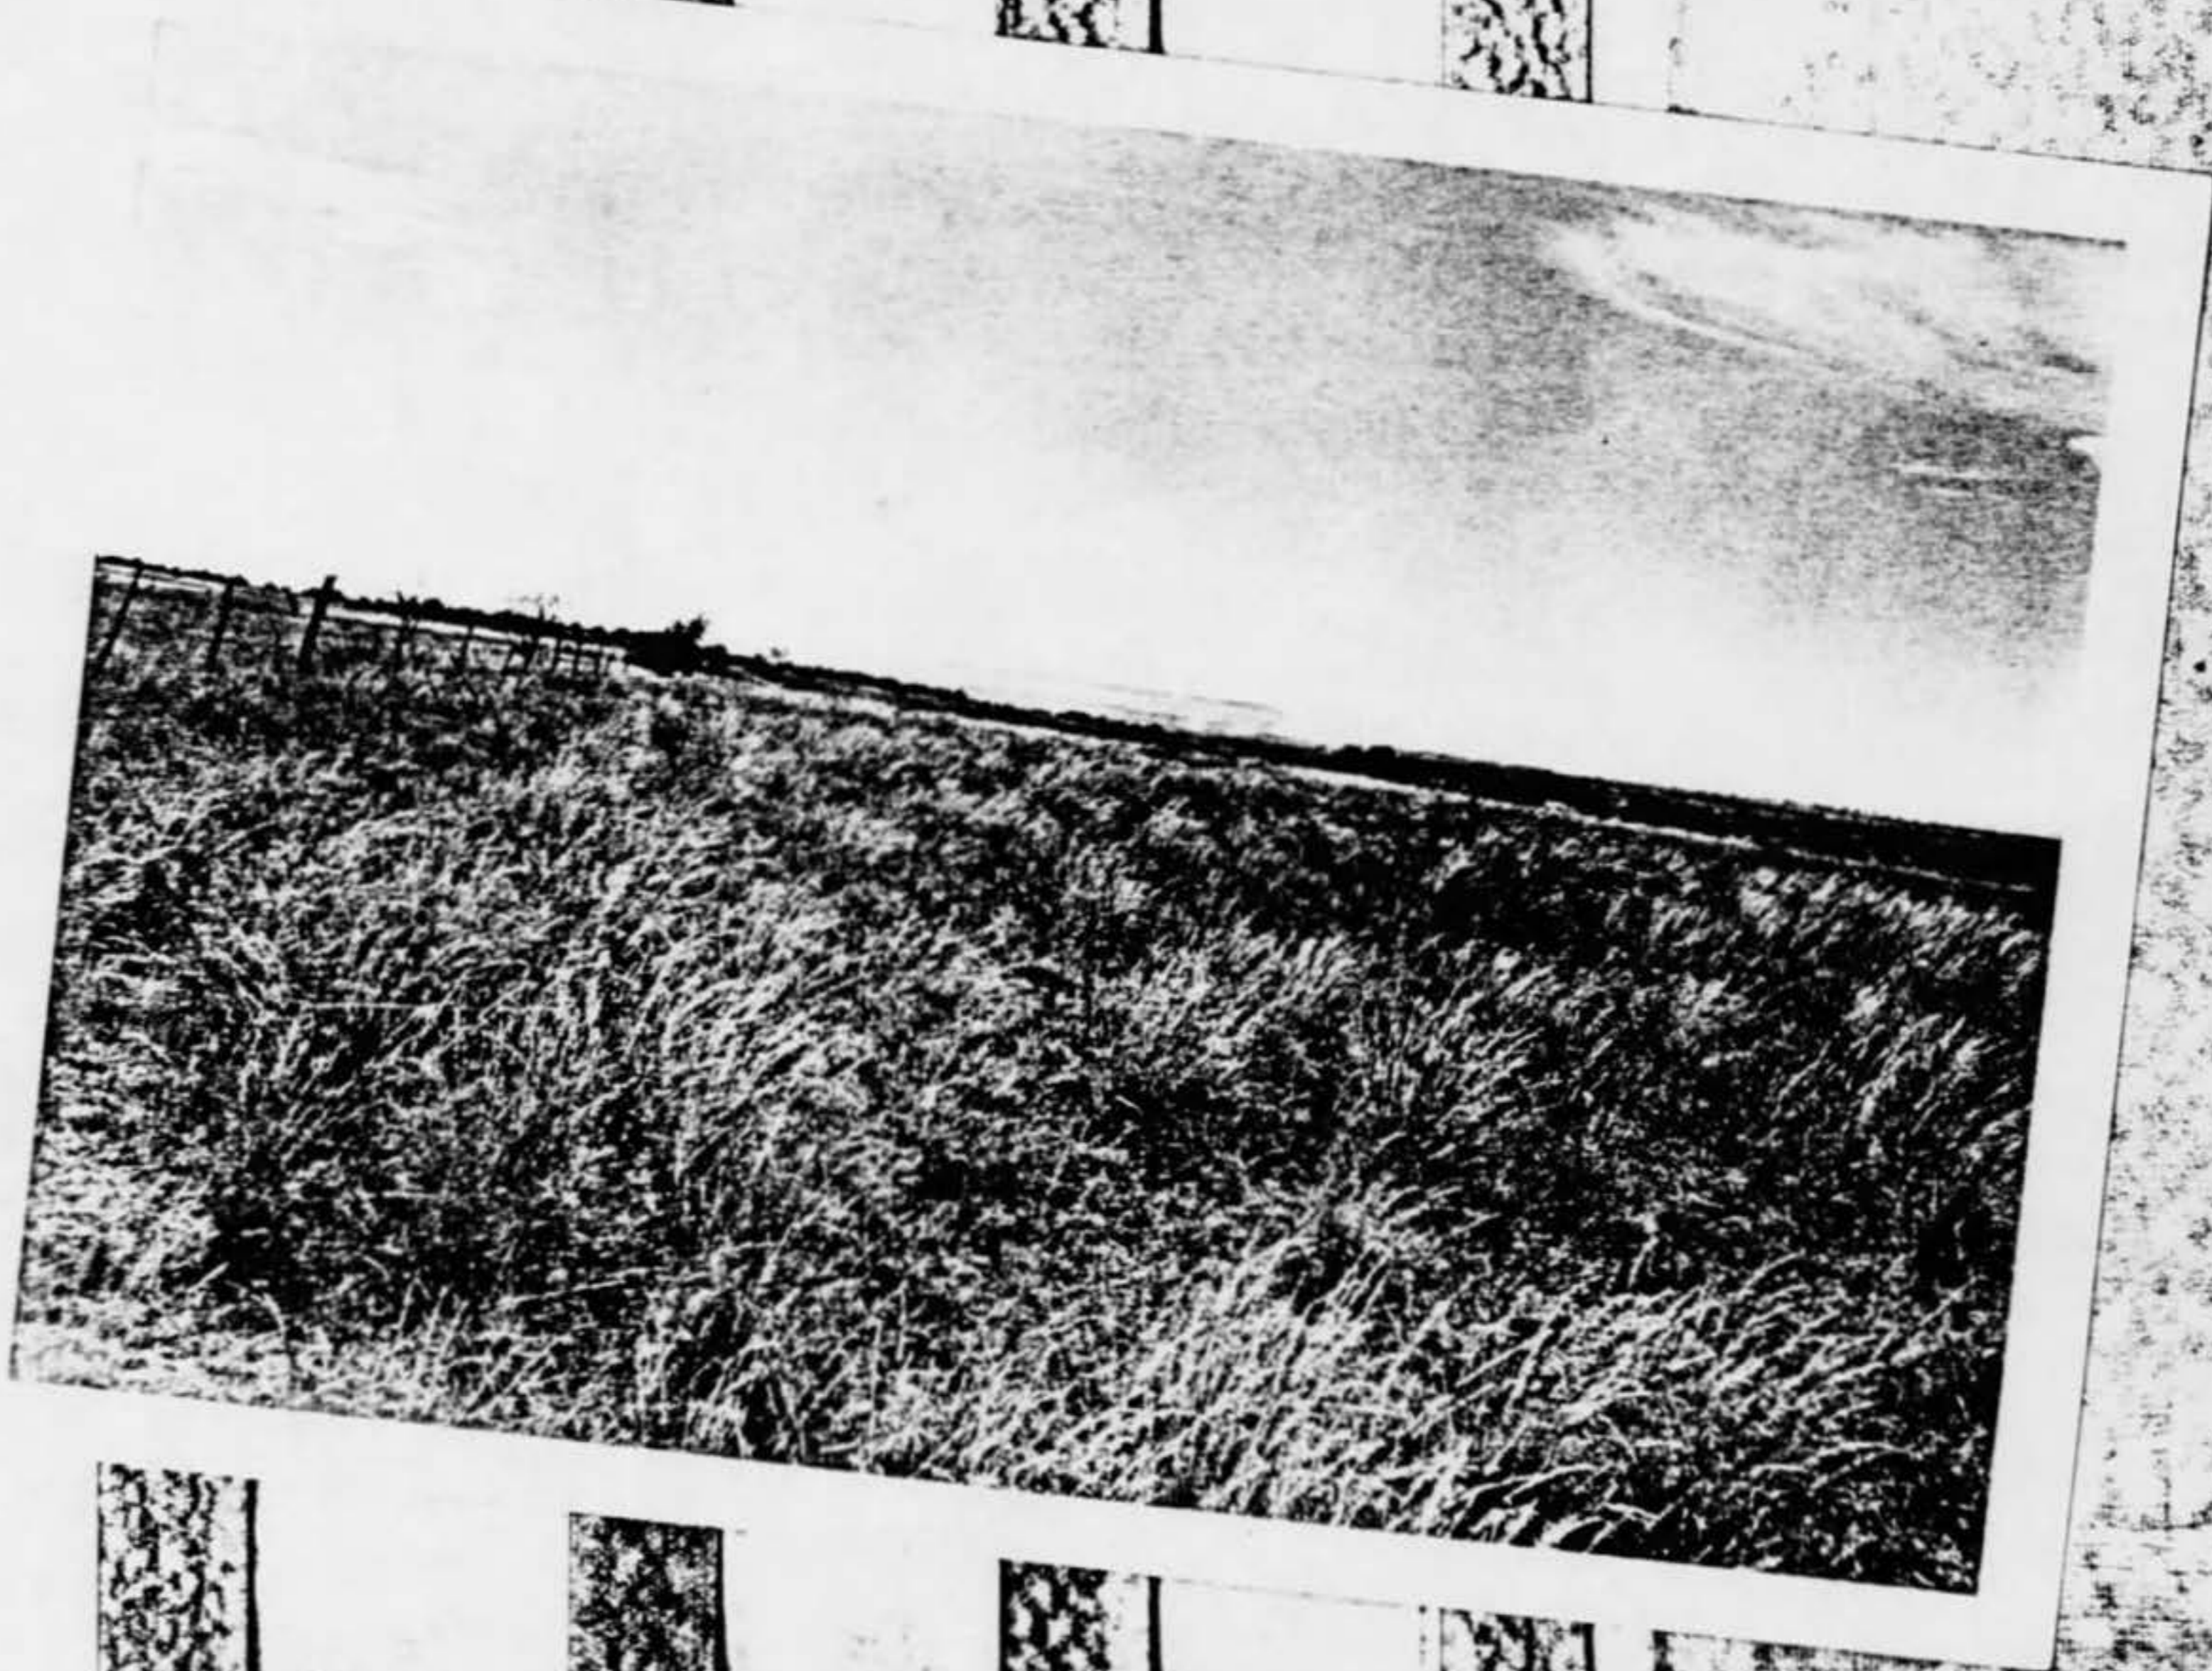

The first shot Number 12-1, we feel, may be of interest to you and was taken from our engineering station 7 + 62 of the proposed access road on a bearing S 11° W, latitude $32^{\circ} 26' 10''$, longitude $97^{\circ} 39' 49''$, using a Kodak Tourist II 620 camera at exposure 1/100 second at F 16 using Verichrome pan film. The person taking the pictures was unaware of the object shown close to the horizon and can offer no explanation as to what it might be. The photographers processing the film are unable to explain the object or how it came to be depicted on the print. They first thought that it was a flaw in the negative but determined this was not the case. They therefore made the two blown up prints of this picture. Individual field notes, the photographic negatives, and the person who took the shots are available in the event further information is desired.

As we discussed, it is requested that you forward these items to the proper authorities for action deemed appropriate. We would appreciate being apprised of any action and the results thereof.

A handwritten signature in cursive script, appearing to read "John C. Adams".

UFO Photograph of 19 Nov 68 Near Acton, Texas

Mr. John C. Adams
Chief, Compliance & Security Division, SW-90
P. O. Box 1689
Fort Worth, Texas 76101

1. Reference the UFO photograph taken by Mr. Paul H. Freund on 19 Nov 68 near Acton, Texas. Photographic analysis of the negative has been completed by our photo analysts. The results of their findings are as follows:

a. Examination and technical analysis of the print and corresponding negative furnished by Lieutenant Colonel Carter indicate that the most probable explanation of the image in question is that it is a film processing or emulsion defect. One evident possible cause is the abnormal appearance of the emulsion side of the negative at the location of the image in question. There appears to be some form of foreign substance of high reflectivity covering the area around the image. The "spot" would be impossible to analyze without destroying the image in question. It appears as though there may have been a chemical deposit on or in the emulsion which prevented exposure in that area and then retarded development when it was dissolved by the processing liquids. Corroboration of this explanation might have been accomplished if the film wrapper had been available for analysis.

b. Facts concerning the exposure of the film on which image in question appears, tend to confirm the probability that the "object" is a result of physical phenomena occurring within the camera. The facts are as follows:

- (1) The photographer did not actually see the "object".
- (2) Eight photos were made (the assumption is made that more than one photo covers the same general area) but the "Object" appears on only one photo.

TDPT (UFO) Official Study

2. The referenced photographic negative which you loaned to Lt Col Carter is enclosed. Thank you for your patience and cooperation.

1. PURPOSE: This report is in response to Work Order Number 68-110 submitted by Lieutenant Colonel Quintanilla (TDPT) requesting analysis of a photograph taken near Acton, Texas, 19 November 1968, to determine the identity of a purported UFO.

2. ANALYSIS:

a. Examination and technical analysis of the print and corresponding negative furnished by Lieutenant Colonel Carter indicate that the most probable explanation of the image in question is that it is a film processing or emulsion defect. One evident possible cause is the abnormal appearance of the emulsion side of the negative at the location of the image in question. There appears to be some form of foreign substance of high reflectivity covering the area around the image. The "spot" would be impossible to analyze without destroying the image in question. It appears as though there may have been a chemical deposit on or in the emulsion which prevented exposure in that area and then retarded development when it was dissolved by the processing liquids. Corroboration of this explanation might have been accomplished if the film wrapper had been available for analysis.

b. Facts concerning the exposure of the film on which image in question appears, tend to confirm the probability that the "object" is the result of physical phenomena occurring within the camera. The facts are as follows:

(1) The photographer did not actually see the "object".

(2) Eight photos were made (the assumption is made that more than one photo covers the same general area) but the "object" appears on only one photo.

Fort Worth, Texas 76101

Reference your letter of 13 Jan 1969. The negatives for the 19 Nov 68, Acton, Texas photos have been submitted to the FTD photo analysis section. However, because UFO photographs are handled on a low priority basis, the analysis has not been completed yet. If the observer wants his negatives back immediately, we can return them before the analysis is completed; however, due to higher priority work, the analysis of the negative may take several months yet. Request you notify us of the decision of the observer or have the observer notify us of his decision.

TO: FGN TEC DIV (TDPT (UFO))

1. In response to your letter of 13 December 1968, we forwarded the original negative of a photograph showing an "unidentified flying object" near Acton, Texas. The photographs and the negative were obtained from the Security Division, FAA Southwest Region with the provision that the negative would be returned.

2. The FAA has asked that we contact you and request return of the negative. Also, they desire comments regarding your analysis of the negative.
