This bright light first appeared at little to the right and slightly above our altitude. It appeared to be coming in our direction, but it did not seem to be closing. It then seemed to divide into two lights. We thought; a formation of several aircraft. It then got dimmer and several reddest lights seemed to follow it. A red then they all disappeared. The color was first whitest, as a normal landing light, and then a greenish-white.

This was interesting to us three pilots as we had never seen any like it before.

Dear Col. Quintanilla:

Thank you for your letter of June 26th and for the attached information relating to VFON report #1735.

In placing both reports (yours and #1735) together on the map it appears both pilots saw the same object. If not, it was certainly quite a coincidence.

If I should happen to get any further word on this report(#1735) I will be certain to get in touch with you.

Sincerely yours,

Possible Identification of Smithsonian Report Nr 1735

Mr. Herb Roth  
Smithsonian Moonwatch Team Director  
c/o United Airlines Flight Training Center  
Stapleton International Airport  
Denver, Colorado 80207

Reference your report nr. 1735, latitude  $34^{\circ} 27'$  North, longitude  $85^{\circ} 52'$  West for 3 May 1967 from Ernest G. Cooper. Attached is a sighting that we received for 2 May 1969 at 2215 EDT (3/0215Z) from the co-pilot of a B-52. It was our conclusion that the co-pilot of the B-52 had seen the decay of some satellite debris, probably from 1967-51A (Explorer 34). It seems quite possible that this is what Captain Cooper also saw, but he appears to have made an error in computing the Greenwich Mean Time.
