

Flare Near Daly Mountain?

Keremeos, B.C. - October 9, 1958

Keremeos – A three-man search party yesterday failed to find any clue to a mysterious object which was seen on Daly Mountain, northeast of Keremeos, Thursday night.

The object, sighted by Alf Boulton of Keremeos at 8:06 pm Thursday, seemed to be a flare-type light which burst from its container near Daly Mountain, settling into a long oval shape which rapidly descended and dropped behind a ridge.

Mr. Boulton, an RCMP officer from Keremeos and a third man climbed to the vicinity yesterday, but were unable to find any trace of the object. However the search was hampered by poor visibility and another search may be made later when the weather has improved.

As soon as the object had been reported, checks were made with air traffic control headquarters establishing that no aircraft of any type were missing.
