---

To whom it may concern:

I have just completed a very interesting book by Edward J. Ruppelt, former head of US Air Force project investigating flying saucers. His book led me to believe that something else other than earth people existed. I was taking my dog for a walk and happened to look skyward and noticed a light approaching from S.W. I called my brother who is 14 and his friend who was 15 and they brought binoculars with them.

The sky was clear and the moon was just above the S.E. horizon of the city. I watched the object through binoculars and noticed a white light reflecting from it. It was the size of a quarter at arm's length.

To confirm my sighting I phoned the Dominion Astrophysical Observatory. They had received another call just previous to mine. They informed me that it was probably a satellite but they had not seen it.

1 hour later I noticed the same thing going from east to west but thought it was the same as 1 hour previous.
