

Bright Fluttering "Star" Travelling Over Aldergrove

Aldergrove, BC - February 24, 1968

APRO Files

Verbatim from notes immediately after incident.

"8:35 pm. Like a very bright star fluttering side to side motion while travelling in an East-Southeast direction about speed of jet. Dimmed and brightened a few times then dimmed and faded out altogether. Not blinking. In view about 90 seconds. Stars were bright and numerous with no clouds at all."
